

# Centralized Digital Platform for Production Execution

## WORK CELL OPERATIONS

We hear your struggles...

“

*“I have paper and Excels everywhere - I'm over-reliant on manual processes!”*

*“Do I have all the materials and resources in-place for the next order?”*

*“What is the utilization rate of my stand-alone machines?”*

*“Do I have the correct NC-program version in the right machine?”*

*“What is the next operation? Where do I need to send these parts next?”*

*“What is the status of this order? Will it be ready by the due date?”*

”

...and we are here to help!

WCO offers flexible integration to connect standalone machine tools and manual operations, either within your Fastems system or as a separate solution. WCO helps enhance the overall execution management, ensuring efficient coordination of all connected devices and timely completion of orders.

### MAIN FUNCTIONALITIES

- **Dynamic Production Planning:** enables operator task prioritization
- **Production Visibility:** both for the past and the future
- **Order Progress Tracking:** for timely updates with orders
- **Inventory Management**
- **Material Process Flow Guidance**
- **Setup Requirement Management**
- **Digitalization of Production Process and Work Documents**
- **Dashboard for Inisghtful Analytics**
- **Integration with ERP systems**

### Optional Additional Modules

Real-time machine monitoring

NC program management and tool data reading

Complete tool data management
